Art Unit

2173

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 05 April 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-31 is/are pending in the application.
- 4a) Of the above claim(s) 20-31 is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-19 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 30 March 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- ☒ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_.
- ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.
- ☐ Notice of Informal Patent Application (PTO-152)
- ☐ Other: \_\_\_\_\_.

## DETAILED ACTION

### *Response to Arguments*

1. Applicant's arguments filed 4/5/2004 have been fully considered but they are not persuasive.

Applicant argues that "Claims 1-19 and Claims 28-31 are directed toward Similar inventions crafted in a different claim style...[and] should be treated as one group for examination purposes." However, group I (claims 1-19) is directed to displaying and interacting with a set of action icons representing an action to be executed, group II (claims 20-27) is directed to displaying a summary of the actions selected by the user, and group III (claims 28-31) is directed to computer components that include an action creating component for building action icons that correspond to user selected actions and building computing device icons that correspond to a number of servers. Groups I, II, and III are subcombinations disclosed as usable together in a single combination, and groups II and III have separate utility, such as obtaining an identification of a number of actions, displaying a number of actions, setting a global priority for selected actions, , establishing a data collection template, specifying a time for a collection template, specifying servers to collect data from, building action and computing device icons, generating an archive file corresponding to user selected **without** the necessary involvement of invention I's displaying and selecting (interaction) actions icons that

represent an action to be executed by computing devices.

### ***Specification***

2. The abstract of the disclosure is objected to because the abstract's last line recites "Accordingly, multiple computing devices may be controlled by a single", it is incomplete and it is missing a period at the end of the paragraph. Correction is required. See MPEP § 608.01(b).

### ***Claim Objections***

3. Claims 12, 13, and 17 are objected to because of the following informalities:

Claim 12, line 6: "displaying the group of action as an action icon" should be changed to --displaying the group of actions as an action icon--;

Claim 12, line 12: "the group of actions represented by the action upon a selection" should be changed to --the group of actions represented by the action icon--;

Claim 13, line 3: "selecting the action icon with the user interface device" (line 3) should be changed to --selecting the action icon with the user interface selection device--;

Claim 17, line 1: "the user interface device is" (line 1) should be changed to

--the user interface selection device is--.

Appropriate correction is required.

***Claim Rejections - 35 USC § 112***

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
6. Claim 1 recites the limitation "instructing each server represented by the selected graphical computing device" in line 10. There is insufficient antecedent basis for this limitation in the claim.

***Claim Rejections - 35 USC § 103***

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

**8. Claims 1-7, 10 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over *Lin et al* (US 6,061,512) and *Tonelli et al* (US 5,821,937).**

Claims 1 and 7:

Lin discloses a method of providing a computing device control interface (development tool), having a graphical user interface for displaying a set of graphical icons (objects) having predefined properties and behavior. The set of objects define the functionality of the development tool. The development tool modifies the set of objects (software created objects) in accordance with new values of service parameters, and generates a set of server control signals (in the form of script file) as a function of a modified set of objects (actions to be executed), (col. 5, lines 28-44; col. 6, lines 44-55). The development tool allows modification of an object based on new values of parameters, then this information is channeled from the changed object to another one or more of the objects (abstract; col. 3, lines 21-46). Lin teaches that the selected actions are to be executed by the server col. 3, lines 46-56; col. 4, lines 53-55; col. 5, lines 28-58; col. 6, lines 44-55; col. 29, lines 32-51). Lin does not teach that the server is represented by a graphical computing device icon. However, Tonelli discloses device icons that represent intelligent device objects on a network. The user is enabled to select a media type representing an intelligent media object, and connect the media type to the device icon (col. 2, lines 38-47; col. 4, lines 44-52).

Tonelli teaches that the objects may represent devices including personal computers, servers, and other device categories (col. 1, lines 34-38, 59-62; col. 6, lines 51-58; col. 7, lines 6-13). Therefore, it would have been obvious to one ordinarily skilled in the art at the time the invention was made to modify Lin's interface to include Tonelli's teaching of icons representing a server because it facilitates selection of functions and manipulation of the server to command execution of the functions (actions, events, tasks, etc.) selected by the user.

Claims 2-4:

See claim 1. Lin teaches that the server comprises a script interpreter and a runtime engine, wherein the script interpreter converts a script file into runtime control signals for controlling the runtime engine (col. 3, lines 47-56). It is a function of the runtime engine to effect the desired application (automated server) based on the control signals provided by the script interpreter. That is, the runtime engine sends and receives messages (events, commands) to and from the script interpreter (col. 5, lines 28-44). Lin teaches that objects are created for an application and are stored on a storage means (data store) that can be implemented using a set of files. The scripts may be stored in files (col. 10, lines 6-14).

Claim 5:

Lin teaches that the development tool may be used to modify the set of objects in accordance with new values of service parameters, and generates the

set of server control signals (script file) as a function of the modified set of objects (col. 3, lines 42-45).

Claim 6:

See claim 1. Lin teaches that each application to be developed is organized as an "application project" (project = planning) that is a collection of object instances that together describe the resources used by an application during development. (col. 10, lines 29-32; col. 12, lines 43-46). Lin teaches that the application developer can use the graphical user interface to invoke a test run (capacity, performance, etc.) of the screen files that have been created. Debugging capability allows developers to step through the execution of scripts and to monitor script variables (col. 12, lines 19-28). Tonelli teaches device pallets that are working subsets of the devices available from the device database, which is a relational database of templates that represent objects. The device icons correspond to intelligent objects built from the templates stored in the device database (col. 6, lines 51-58). Lin/Tonelli teaches action icons implementing a collection of templates for performance testing (capacity planning) in a computing device.

Claim 10:

Lin teaches that the invention may be embodied as computer readable program code means (col. 4, lines 3-9).

Claim 11:

Lin teaches a computer system having an operating system (col. 5, lines 1-9), processor (col. 30, lines 13-17; col. 31, lines 6-9), and a memory (data store; fig. 8; col. 10, lines 6-20).

**9. Claims 8 and 12-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over *Lin/Tonelli* and *Collier et al* (US 5,815,152).**

Claim 8:

See claim 1. Lin/Tonelli does not teach that action icons can assign a common priority for a corresponding action to each computing device represented by the selected graphical computing device icon. However, Collier discloses a method for defining graphic rules, wherein routing objects on a condition leg can be an automated task or a parallel object. A parallel routing object is a collection of tasks, which can be performed concurrently. All tasks defined as part of the parallel routing object must be completed prior to the system routing the case to the next task defined in the process (col. 8, lines 4-25). Therefore, it would have been obvious to an artisan in the art at the time the invention was made to modify Lin/Tonelli's system to include Collier's teaching of selecting a common priority (same time) to perform an action (task) for a group of objects (device icons) because it enables the user to determine what objects or group of objects will

execute what action and synchronize the time of execution.

Claim 12:

See claim 8. Lin/Tonelli does not teach displaying a group of icons as an action icon and a group of computing devices as a computing device icon on the display, and instructing each computing device represented by the computing device icon to execute the group of actions represented by the action icon.

However, Collier teaches a condition leg, which may have a series of action objects (col. 7, lines 22-35). Collier teaches that the user may create multiple rules, which are represented by a single icon (col. 3, lines 42-54; col. 4, lines 55-67); can add more conditions to a rule (col. 5, lines 17-34; col. 7, lines 7-8, 22-40).

Claim 13:

See claim 12. Collier teaches that an action object is an icon representing a specific action to be executed by the system. The user drags the action object off the toolbar to the condition leg and drops the action object on top of the condition leg (col. 7, lines 31-35).

Claims 14 and 15:

See claim 1. Lin/Tonelli teaches an archive file that corresponds to groups of actions represented by action icons, wherein the archive file is a script file (col. 3, lines 47-56; col. 5, lines 28-44; col. 10, lines 6-14).

Claim 16:

See claim 1. See Lin: figs. 11, 12.

Claim 17:

Lin teaches a mouse as a user interface selection device (col. 14, lines 14, 26, 65).

**10. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over *Lin/Tonelli* and *Vaughn et al* (US 6,353,446 B1).**

Claim 9:

Lin/Tonelli does not teach that the computer device is a server computer in an enterprise network. However, Vaughn discloses a method for assisting a user in managing an enterprise network wherein a browser-based help desk window may be invoked by the user (service person). The help desk window includes trouble information fields for entering data related to client trouble calls. The user is enabled to embed the network visibility link onto the application toolbar using menu selection and drag-and-drop commands. Vaughn teaches that application launch button associated with other network management applications and/or servers may be embedded into the application toolbar (col. 2, lines 12-46; col. 5, lines 13-25, 46-67; figs. 1 & 3). Lin/Tonelli/Vaughn teaches an icon representing a server in an enterprise network. Thus, it would have been obvious to one having ordinary skill

in the art at the time of invention to modify Lin/Tonelli's interface to include icons representing servers in an enterprise network because this type of network can span diverse geographical locations and usually includes a variety of different platforms, operating systems, protocols, and network architectures.

**11. Claims 18 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over *Lin/Tonelli/Collier and Vaughn*.**

Claim 18:

See claim 9. Lin/Tonelli/Vaughn teaches an icon representing a server in an enterprise network (col. 2, lines 12-46; col. 5, lines 13-25, 46-67; figs. 1 & 3).

Claim 19:

Lin teaches that the invention may be embodied as computer readable program code means having computer-executable instructions (col. 4, lines 3-9).

***Conclusion***

12. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

13. Any inquiry concerning this communication or earlier communications from the examiner should be directed to X L Bautista whose telephone number is (703)

305-3921. The examiner can normally be reached on Monday-Thursday (8:00-18:00), Fridays Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John W Cabeca can be reached on (703) 308-3116. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

14. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
